

COMPANY LINE

a brief look to what we are doing

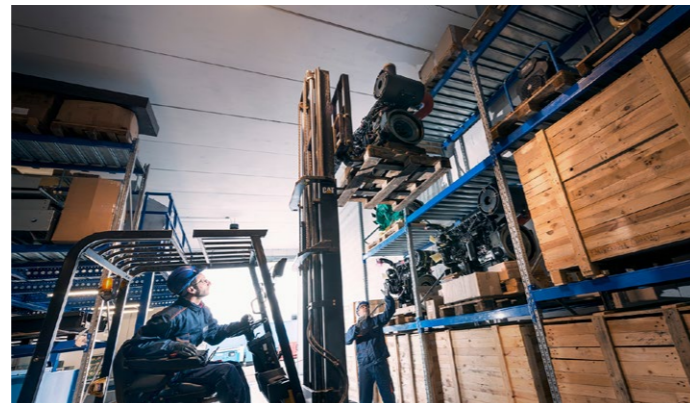

OREFICE[®]
generators

OUR COMPANY

"Since 1938 offers a wide range of standard and customized generating sets, including diesel, biodiesel, gas, and gasoline powered generators. Our 50hz and 60hz gensets, manufactured in Italy, are designed to comply with the most common international standards and emission guidelines. From constructions to manufacturing, from data centers to telecommunications Orefice generators means power solutions designed around your business."

There is no denying that we as a company take pride and value our family traditions, however, as far as our quality is concerned, we can match pace with anyone. For this reason, big global brands such as Navistar have chosen us as their partner for the region of Italy. For the same reason, every client and project always poses a new challenge to us.

For us, each one of our customer is unique and special and deserves the highest level of service. This is the reason why we assign an Account Manager to our customer right from the moment of signing the first contact who thoroughly guides in the entire process of choosing the best solution for his needs, in defining the conditions of supply and in the management of the order.

However, that's not all! Thanks to our tele-control systems and tele-diagnosis, we are easily able to verify, even remotely, the proper functioning of

our generators and ensure the first intervention online, wherever necessary. Through various means of personalized assistance, we are able to ensure maximum guarantee to those customers, such as those working in hospitals, telecommunications and data center whose activities should not be hindered. Our assurance spreads to the entire world with the help of direct intervention from the skilled technicians equipped with coverage means and response time.

Our whole production process is designed and monitored so as to provide our customer with safe, reliable and high-technology products, capable of effectively solving their needs.

OUR PRODUCTS

Our attention to details is scrupulous: the designing process, component selection, the finesse, assembly techniques and testing. This is what has made the 'Made in Italy' tag famous throughout the world and its products difficult to imitate.

We produce generating sets for many different applications in four series:

MINIWATT
Gasoline engine 3000rpm
from 3 up to 8kVA

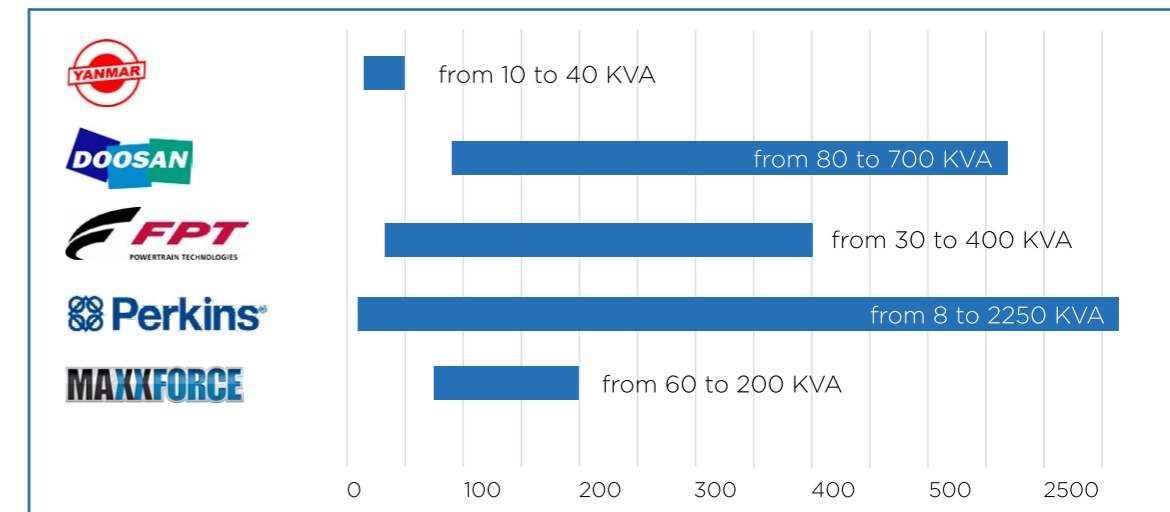

WATTFAST
Diesel engine 3000rpm
from 4 up to 15kVA

VOLTA
Diesel engine 1500rpm
from 6 up to 60kVA

TESLA
Diesel engine 1500rpm
from 6 up to 2250kVA
